Current transformers (CT) are a series connected type of instrument transformer. They are designed to present negligible load to the supply being measured and have an accurate current ratio and phase relationship to enable accurate secondary connected metering.

ABSTRACT Flow and transport modeling of a deep faulted geothermal reservoir is necessary to optimize the heat exploitation. To build these models, a good understanding of the fluid flow in the faults is an important issue.

Power-system protection is a branch of electrical power engineering that deals with the protection of electrical power systems from faults through the disconnection of faulted parts from the rest of the electrical network. The objective of a protection scheme is to keep the power system stable by isolating only the components that are under fault, whilst leaving as much of the network as ...
