In computer science, a graph is an abstract data type that is meant to implement the undirected graph and directed graph concepts from mathematics; specifically, the field of graph theory.. A graph data structure consists of a finite (and possibly mutable) set of vertices or nodes or points, together with a set of unordered pairs of these vertices for an undirected graph or a set of ordered ...

- [Instructor] Welcome to this course on data structures and algorithms. In this course, we will learn about some of the commonly used algorithms and data structures. We will start by learning about how to analyze algorithms then move on to talking about arrays, which is an ingrained data structure in most of the programming languages. Then we will learn some simple sorting algorithms, like ...

In this post, taken from the book R Data Mining by Andrea Cirillo, weâ€™ll be looking at how to scrape PDF files using R. Itâ€™s a relatively straightforward way to look at text mining â€” but it can be challenging if you donâ€™t know exactly what youâ€™re doing. Until January 15th, every single ...

In computing, a hash table (hash map) is a data structure that implements an associative array abstract data type, a structure that can map keys to values. A hash table uses a hash function to compute an index into an array of buckets or slots, from which the desired value can be found.. Ideally, the hash function will assign each key to a unique bucket, but most hash table designs employ an ...
