Observing the fact that sustainability is interdisciplinary is only the beginning. Sustainability has deep roots in both the physical and social sciences. Understanding the effect and interaction of different activities with the natural environment and its implication on current and future quality of life is based on advances in a variety of different areas of the natural sciences.

During the mid-20th century, the philosopher Karl Popper emphasized the criterion of falsifiability to distinguish science from nonscience. Statements, hypotheses, or theories have falsifiability or refutability if there is the inherent possibility that they can be proven false. That is, if it is possible to conceive of an observation or an argument which negates them.
