The mean of a probability distribution is the long-run arithmetic average value of a random variable having that distribution. In this context, it is also known as the expected value. For a discrete probability distribution, the mean is given by $\sum x_i p(x_i)$, where the sum is taken over all possible values of the random variable and $p(x_i)$ is the probability mass function.

Mean - Wikipedia

Hi Mic, I was searching for a helpful introduction to copula/R then I found this post. I was amazed by your succinct explanation and example. Thanks for creating this blog and sharing with others!
