Motion planning (also known as the navigation problem or the piano mover's problem) is a term used in robotics for the process of breaking down a desired movement task into discrete motions that satisfy movement constraints and possibly optimize some aspect of the movement.. For example, consider navigating a mobile robot inside a building to a distant waypoint.

Motion planning - Wikipedia

Robot locomotion is the collective name for the various methods that robots use to transport themselves from place to place.. Wheeled robots are typically quite energy efficient and simple to control. However, other forms of locomotion may be more appropriate for a number of reasons, for example traversing rough terrain, as well as moving and interacting in human environments.

This book presents a unified treatment of many different kinds of planning algorithms. The subject lies at the crossroads between robotics, control theory, artificial intelligence, algorithms, and computer graphics.

Advanced Motion Systems Inc. offers Automation, robotic and vision solutions in NY. Advanced motion systems have solutions for the OEM's machine builders as well as end users looking to improve the performance of automation machinery. We have expertise in Traceability, machine Vision, barcode, robotic and networking Technology Solutions.

Automation, PLC, Robotic, Vision and Barcode Distributor

The ArbotiX-M Robocontroller is at the heart of every Interbotix Robot. This versatile robot controller is an advanced control solution for BIOLOID and DYNAMIXEL based actuators.
