Preface This document provides span tables for dressed unseasoned hardwood which may be used to supplement the design information provided in AS 1684 Residential Timber Framed Construction, Part 2: Non-Cyclonic

Thora

Timber framing and "post-and-beam" construction are traditional methods of building with heavy timbers, creating structures using squared-off and carefully fitted and joined timbers with joints secured by large wooden pegs. It is commonplace in wooden buildings from the 19th century and earlier. If the structural frame of load-bearing timber is left exposed on the exterior of the building it ...

2 1.2.2 - The design earthquake considered in this Specification, corresponds to high- intensity earthquake defined in 1.2.1 above. For buildings with Building Importance Factor of $I=1$ in accordance with Chapter 2, Table 2.3, the probability of exceedance of the design earthquake within a period of 50 years is 10 %. Earthquakes with different the

ANNEX SPECIFICATION FOR STRUCTURES TO BE BUILT IN DISASTER

1. Introduction. Timber for construction is one of the many forest products used around the world. It is used in buildings both large and small; here we consider timber for the construction of buildings of six or more storeys, and the biochemistry and chemistry of wood modification that could enable much larger buildings.
