

treating pediatric bed wetting pdf

Nocturnal enuresis, also called bedwetting, is involuntary urination while asleep after the age at which bladder control usually begins. Bedwetting in children and adults can result in emotional stress. Complications can include urinary tract infections.. Most bedwetting is a developmental delayâ€”not an emotional problem or physical illness. Only a small percentage (5 to 10%) of bedwetting ...

Nocturnal enuresis - Wikipedia

Hi there, This is a very interesting article as I wet the bed and my current client did and now having nocturia now. What I always assumed is that is was linked to toxins in the body, more probably heavy metals, so the body was trying to get rid of these and did this by increasing urine flow.

TCA overdose is a significant cause of fatal drug poisoning. The severe morbidity and mortality associated with these drugs is well documented due to their cardiovascular and neurological toxicity. Additionally, it is a serious problem in the pediatric population due to their inherent toxicity and the availability of these in the home when prescribed for bed-wetting and depression.
