Write amplification (WA) is an undesirable phenomenon associated with flash memory and solid-state drives (SSDs), where the actual amount of information physically-written to the storage media is a multiple of the logical amount intended to be written.. Because flash memory must be erased before it can be rewritten, with much coarser granularity of the Erase operation when compared to the ...

Begin from the jewel center of interest and write outwards

Write once read many (WORM) describes a data storage device in which information, once written, cannot be modified. This write protection affords the assurance that the data cannot be tampered with once it is written to the device.. On ordinary (non-WORM) data storage devices, the number of times data can be modified is limited only by the lifespan of the device, as modification involves ...
