Les fentes de Young (ou interférences de Young) désignent en physique une expérience qui consiste à faire interférer deux faisceaux de lumière issus d'une même source, en les faisant passer par deux petits trous percés dans un plan opaque. Cette expérience fut réalisée pour la première fois par Thomas Young en 1801 et permit de comprendre le comportement et la nature de la lumière.

Constructive interference occurs when the phase difference between the waves is an even multiple of π (180°), whereas destructive interference occurs when the difference is an odd multiple of π . If the difference between the phases is intermediate between these two extremes, then the magnitude of the displacement of the summed waves lies between the minimum and maximum values.

Résumé: La physique quantique est née dans les années 1920 après qu'Einstein ait introduit la notion de quantum dans les rayons lumineux pour expliquer l'effet photoélectrique, et que De Broglie ait généralisé le double visage onde/particule aux particules de matière. Sa générale hypothèse a été confirmée expérimentalement par les phénomènes d'interférences des électrons.
